

APOD Name: _____
My assigned day: _____

Each student is responsible for presenting an APOD (Astronomy Picture of the Day) to the class. NASA has updated this website daily for the past 18 years. You can pick any day from this 18-year period to present to the class. This presentation should be about 1-minute long in your own words. You will need to turn in a typed 1-2 paragraph summary with the date of your APOD at the top of the page. This will be worth 20-points, if it is not ready on time you will receive late points. You need to be ready to present at the beginning of class. Here is the calendar page where you can pick any day that you'd like.
